SUMMARY

DevOps Engineer with hands-on experience building cloud-native CI/CD pipelines and deploying containerized applications on Kubernetes. Skilled in infrastructure automation, observability, GitOps, and cloud-native development using Docker, Kubernetes, AWS, Terraform, GitHub Actions, and Golang. Experienced in implementing monitoring, logging, and distributed tracing solutions using Prometheus, Grafana Loki, and OpenTelemetry. Passionate about building scalable, automated, and reliable cloud infrastructure.

PROJECTS

Go Web App | Golang, Docker, Kubernetes, AWS EKS, Helm, ArgoCD, GitHub Actions

- Built an automated CI/CD pipeline using **GitHub Actions** to build, test, and push Docker images for a **Golang** web application.
- Containerized the application using multi-stage builds in Docker and deployed it to a Kubernetes cluster on **Amazon EKS**.
- Implemented GitOps-based continuous delivery with **Argo CD** and managed deployments using Helm charts.
- Configured ingress routing with **NGINX Ingress** Controller to expose the application externally.

Blog App | React, Node.js, PostgreSQL, Docker, AWS EKS, Terraform, GitHub Actions, Argo CD

- Designed and deployed a containerized 3-tier blog application (frontend, backend, database) using Docker and **Kubernetes** on Amazon EKS.
- Automated build workflows using GitHub Actions and implemented infrastructure provisioning with **Terraform**.
- Implemented GitOps-based continuous delivery using Argo CD to deploy and sync updated image versions to the cluster.
- Integrated **DevSecOps** practices including SCA, container scanning with Trivy, IaC security checks using Checkov, and secure runtime configurations.

3 Tier Application | Kubernetes, Docker, Prometheus, Thanos, OpenTelemetry, GitHub Actions

- Designed and deployed a containerized 3-tier task management application (frontend, backend, PostgreSQL) using Docker and Kubernetes.
- Implemented observability stack using **Prometheus**, Thanos, and OpenTelemetry to collect metrics and traces for application monitoring.
- Configured **high-availability PostgreSQL** cluster using **CloudNativePG** operator on Kubernetes.
- Built a CI pipeline using GitHub Actions to automatically build and push frontend and backend Docker images to Docker Hub.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EKS, EC2, S3), Terraform, Supabase, Linux System Administration
- **Containers & Orchestration:** Kubernetes (EKS), Docker, Helm
- **Observability:** Prometheus, Grafana, Loki, OpenTelemetry
- **Datastores:** PostgreSQL, MySQL, CloudNativePG
- **CI/CD:** Github Actions, ArgoCD
- **Languages & Frameworks:** Golang, Typescript, Java, C/C++, SQL, Next.js, React, Tailwind CSS

KODEKLOUD CERTIFICATIONS

- [AWS Solutions Architect Associate](#)
- [Red Hat Certified System Administrator \(RHCSA\)](#)
- [Terraform Basics Training Course](#)
- [Prometheus Certified Associate](#)
- [Advanced Golang](#)

PUBLISHED BLOGS

- [How to Make Kubernetes Deployment Production Ready](#)
- [How to Deploy an Open Source LLM Reliably](#)
- [Terraform for Beginners: A Complete Hands-On Guide](#)
- [Docker in Depth](#)

EXPERIENCE

CloudRaft | Associate Full Stack Engineer

July 2025 - Oct 2025

- Developed a full-stack internal Service Desk application using React.js, TypeScript, Supabase, Tailwind CSS, and Mantine UI, enabling clients to raise support tickets and admins to manage, track, and resolve issues.
- Implemented RBAC authentication, ticket management, real-time updates, live chat, files and image attachments, SLA tracking, advanced filtering, and timestamped ticket activity for client-admin support workflows.
- Improved **CloudRaft website** performance upto **20%** by optimizing the Next.js application, while also resolving major JavaScript errors and improving mobile responsiveness.
- Developed and published a technical blog on [Kubernetes application deployment](#) best practices on the CloudRaft website.

CloudRaft | Frontend Developer Intern

April 2025 - July 2025

- Led frontend development for a **client SaaS MVP**, translating Figma designs into a scalable responsive web application using React.js, TypeScript, and Tailwind CSS, and delivered the frontend within 2 months as the sole frontend developer on the project.
- Integrated **Golang backend Rest APIs** across authentication, including email/password and Google OAuth, password reset, account invitations, and account management.
- Implemented Stripe billing and subscription workflows through backend APIs, including plan management, payment methods, billing history, and account creation/change flows.
- Built core SaaS functionality including role-based access for admins/users, credit tracking, compression job management, job history, and account management.
- Integrated backend logs and metrics APIs to display compression-job status and execution information in the frontend, and used Redux for state management across complex user, account, and subscription flows.
- Developed frontend tests with Jest and React Testing Library, resolved TypeScript/runtime issues, and **optimized Rest APIs** request handling to improve application stability.

EDUCATION

Deogiri Institute of Engineering and Management Studies | CGPA: 7.66
B.Tech Electronics and Telecommunication

Graduation Year: 2024
